Medshop Australia improves the health of their inventory with Sage Inventory Advisor

Sage
Inventory Advisor
Success Story

Challenge

A growing Medshop needed a solution to meet clients delivery expectations whilst maintaining optimal inventory levels

Solution

Medshop has an integrated solution based on Sage Inventory Advisor and Sage ERP X3 (enterprise resource planning)

Result

The health of Medshop's inventory was significantly improved with increased sales, faster stock turns and the value of over-stocked lines in steady decline

Customer

MEDSHOP AUSTRALIA

Industry

Medical Distributor

Location

Melbourne, Victoria

System

Sage Inventory Advisor

Sage ERP X3

Sage Business Partner

Enabling

Medshop is a leading provider of medical supplies to the Australian and Pacific Island region. With a number of warehouses and thousands of products, ranging from low value consumables through to high-end hospital diagnostic equipment, Medshop strives to satisfy customer demands without overstocking.

SAFETY STOCK IS THE KEY

Achieving the holy grail of inventory management – the magical balance of minimal inventory while meeting variable customer demand in the face of unreliable supply – is only possible with optimal safety stock levels.

“By monitoring how well we forecast a product and how reliable the supply is, SIA dynamically adjusts the level of safety stock required” explains Steven Cumper, director of Medshop Australia.

“For items that are more likely to end up with excess SIA shrinks the safety stock away, while safety stock is increased for items with a risk of running out of stock” Steven continues.

Sage Inventory Advisor's ability to compute optimal safety stock levels has proven valuable for Medshop Australia.

“Within 6 months, there was a 14% increase in product availability and a 38% increase in sales with just a 16% increase in focused investment”
