Starleaton make a big impact on the digital printing industry using Sage Inventory Advisor

Challenge

Starleaton needed to minimise time spent running reports for purchasing meetings for each supplier and improve the determination of stock levels

Solution

Starleaton has an integrated solution based on Sage Inventory Advisor and Sage 300 ERP (enterprise resource planning)

Result

Improved visibility via an up to date inventory dashboard and optimal inventory levels have dramatically reduced overstocks and surplus orders

Starleaton Digital Solutions prides itself on being a truly "start to finish" solution provider to the large format digital printing industry.

VISIBILTY & EASE OF USE

Dashboard KPIs track inventory performance and exception lists provide focus, directing effort where needed.

Having such extraordinary visibility and access to information prompted Josh Eaton, Starleaton operations manager, to say "what used to be a week-long purchasing meeting can now be done on the fly with all data at our fingertips, rather than running long cumbersome reports".

Josh continues "The more we work with SIA, the more we realise its worth. Not having to keep as much stock on the shelves increases cash flow - I just love watching the excess stock figure drop every day!"

Sage Inventory Advisor's visibility of all inventory data has changed the way that Starleaton view their business, and its ease of use means that the team can't live without it.

"We use Sage Inventory Advisor every day to get a snapshot of our inventory; fill rates, stock outs and forecasts, helping us to set realistic goals for all aspects of our business.
We can't live without it!"
