

Sage Inventory Advisor supercharges Hartland Controls

Customer: Hartland Controls

Industry: Manufacturing - Electrical goods

Location: USA

ERP: Sage 500

Founded in 2002, Hartland Controls specializes in the design and manufacture of mission-critical electrical contactors, class II transformers, capacitors, relays, auxiliary switches, and configured assemblies.

We were able to reduce our inventory value by an impressive \$1,000,000 thanks to Sage Inventory Advisor

Becky Wilkinson, Supply chain manager

Challenge

Zero visibility of inventory

Solution

NETSTOCK integrated into Sage 500

Result

\$1 million reduction in inventory

Hartland Controls maintain a large inventory of finished products and configurable components to ensure the regular, steady, and timeous supply to their customers. With over 3,000 SKU's to manage they were finding their manual process was becoming far too unreliable and time-consuming as they had to review each item one at a time manually. They had no visibility of stock-outs let alone potential stock-outs and had no way to calculate their safety stock.

"We were able to reduce our inventory value by an impressive \$1,000,000 thanks to Sage Inventory Advisor",

said Becky Wilkinson, Supply chain manager. "Once implemented and integrated with our Sage 500 ERP, we could set safety stock parameters and measure and manage our supplier lead times. We had full visibility of our potential stock-outs and could take actionable steps to avoid stock-outs from occurring. With the help of the advanced algorithms, we were able to do our forecasts with confidence and would not have been able to bounce back as quickly as we did from COVID19 without Sage Inventory Advisor" concluded Becky.
